

TSD-100

Expansion card of 4 supervised sounder outputs

Description

The TSD-100 card has been designed to increase the number of conventional sounder outputs to DETNOV's CCD-100 range of conventional fire control panels.

The TSD-100 card provides four supervised outputs for conventional sounders which may be used in order to carry out activations by zone in a conventional system.

CCD-100 fire control panels are able to host up to three TSD-100 cards, obtaining a total of 12 additional conventional sounder outputs.

Programmable via SWD-100 software

Technical features

Sounder outputs		
	Maximum load:	500 mA for each output
	Delay selectable in panel board:	0-10 minutes
Environment		
	Operating temperature:	From -5°C to +40°C
	Relative humidity:	95% without condensation
